CUSTOM SERVER

We can build any kind of server you need, from a super small Celeron with 512MB of RAM to a Quad processor Xeon with 16GB of RAM. Need many servers? Need a private rack? Need clustering? Need a SAN? None of these are a problem for us. We do it all the time. We provide fully managed servers, with full monitoring, backups, patches, and support. Plus, we host it in our Tier 1 data center, with multiple fiber connections to multiple providers, and fully redundant cooling and power.
